Bringing AI Everywhere

Intel ARC™ A770  
AI application development &  
deployment vehicle

Ely Zeng 曾智暉

Discrete Graphics Software Engineer

March 27<sup>th</sup>, 2024

# Benefits of Running AI Locally

## Increased Privacy

No need to transmit sensitive data over the internet / third parties / tech corporations

## Lower Latency

No need for data to be transmitted across the planet

## Increased Control

Flexibility on what you can and cannot run

# How AI Runs on Intel Hardware

3 main pillars of the Intel AI PC

		Ideal for	Product Range
CPU		Ideal for quick, lightweight AI tasks such as chat bots	Intel® Core™ processors
NPU		Efficiently runs sustained AI workloads as webcam filters	Intel® Core™ Ultra processors
GPU & Built-in GPU		Runs heavy AI workloads such as generative content	Intel® Core™ Ultra processors Intel® Arc™ A-Series Graphics

What this presentation will cover

# Intel® Arc™ Graphics have Dedicated Hardware for AI Acceleration

# XMX

# AI development & deployment on Intel® Arc™ A770

## Gaming

### Intel® XeSS AI upscaling

Get the latest visual technologies like AI-accelerated XeSS image upscaling for faster gaming with high image quality

## Content Creation

### Faster Creation Enhancements

Execute post-processing, upscale images, 3D rendering and edit videos quickly easily with powerful XMV AI capabilities.

## Generative Content

### Generative Enhancements

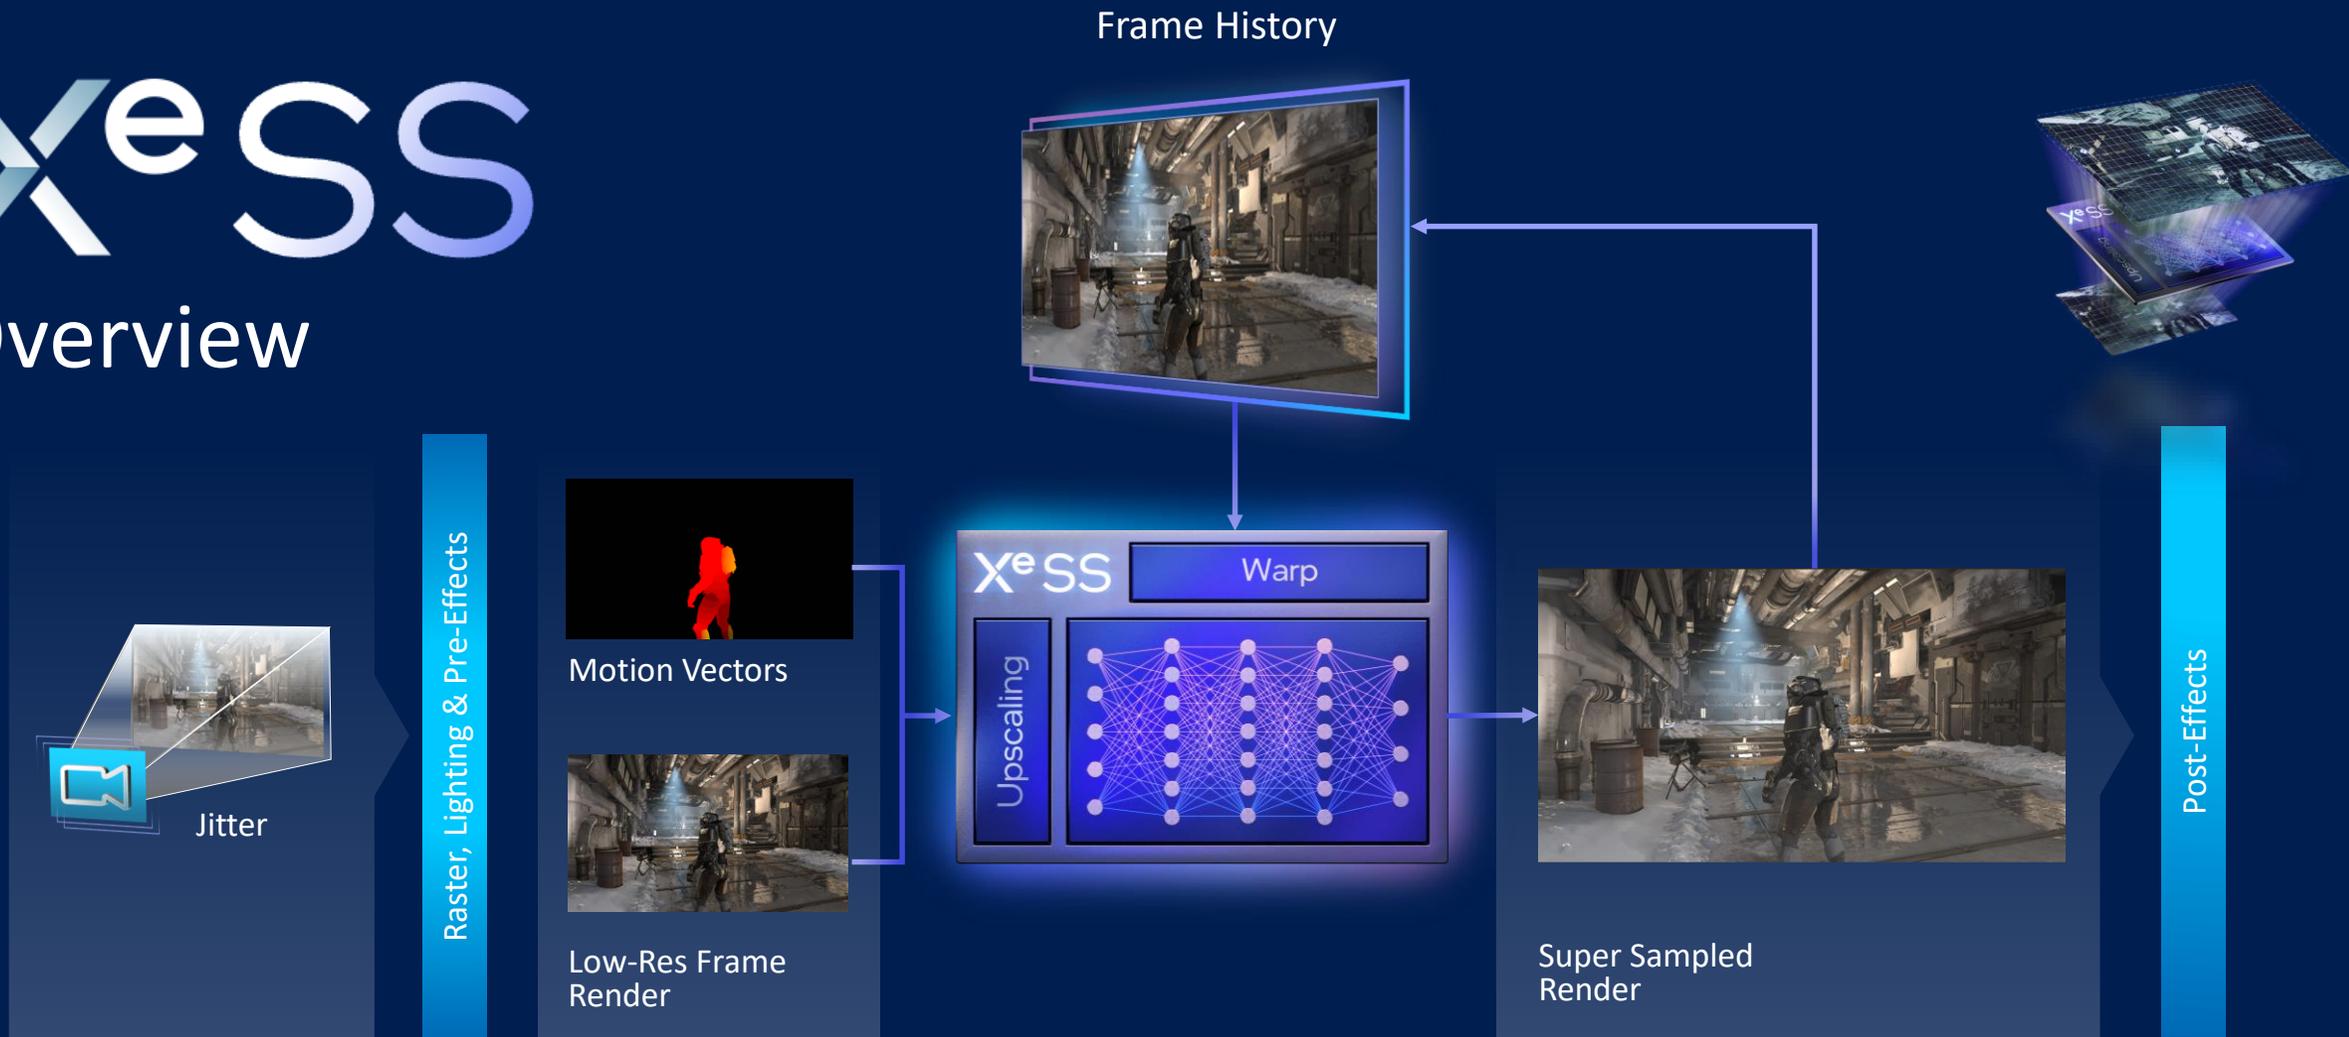

Generative content with Intel XMV AI engines . Example run text-to-image content generation locally on your own system.

# Intel<sup>®</sup> XeSS AI upscaling

# XeSS

## Overview

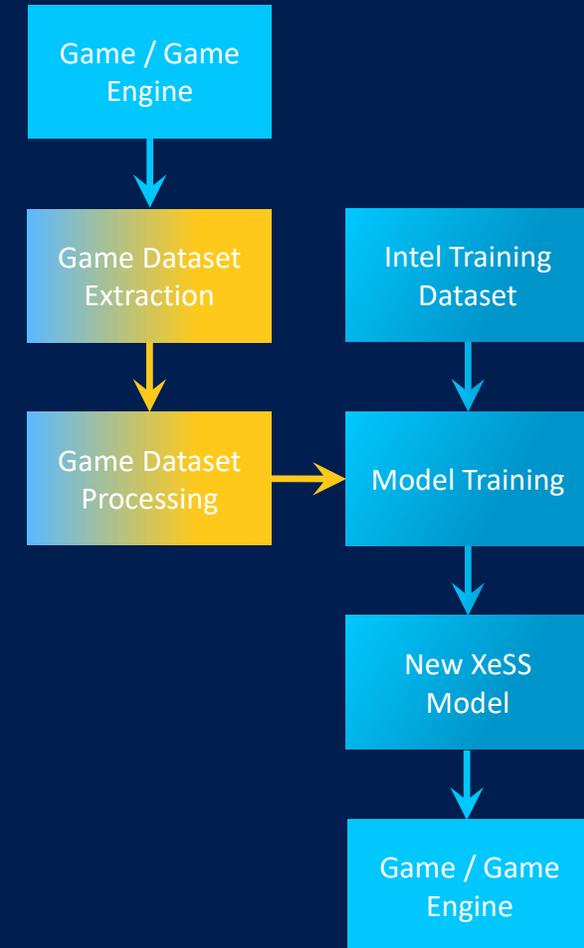

Use of AI In Gaming: Higher Quality Upscaling

# Improved AI models with data set extraction

## Dataset extraction API

- Integrate with the game engine to capture training data
- Captures:
  - Jitter offsets
  - Low-res jittered HDR color
  - Low-res depth buffer
  - Low-res motion vectors / hi-res dilated motion vectors
  - Optional parameters
- The game/engine:
  - Freezes timestamps and suspends animations, dynamic effects, etc
  - Captures jittered data over frozen scenes

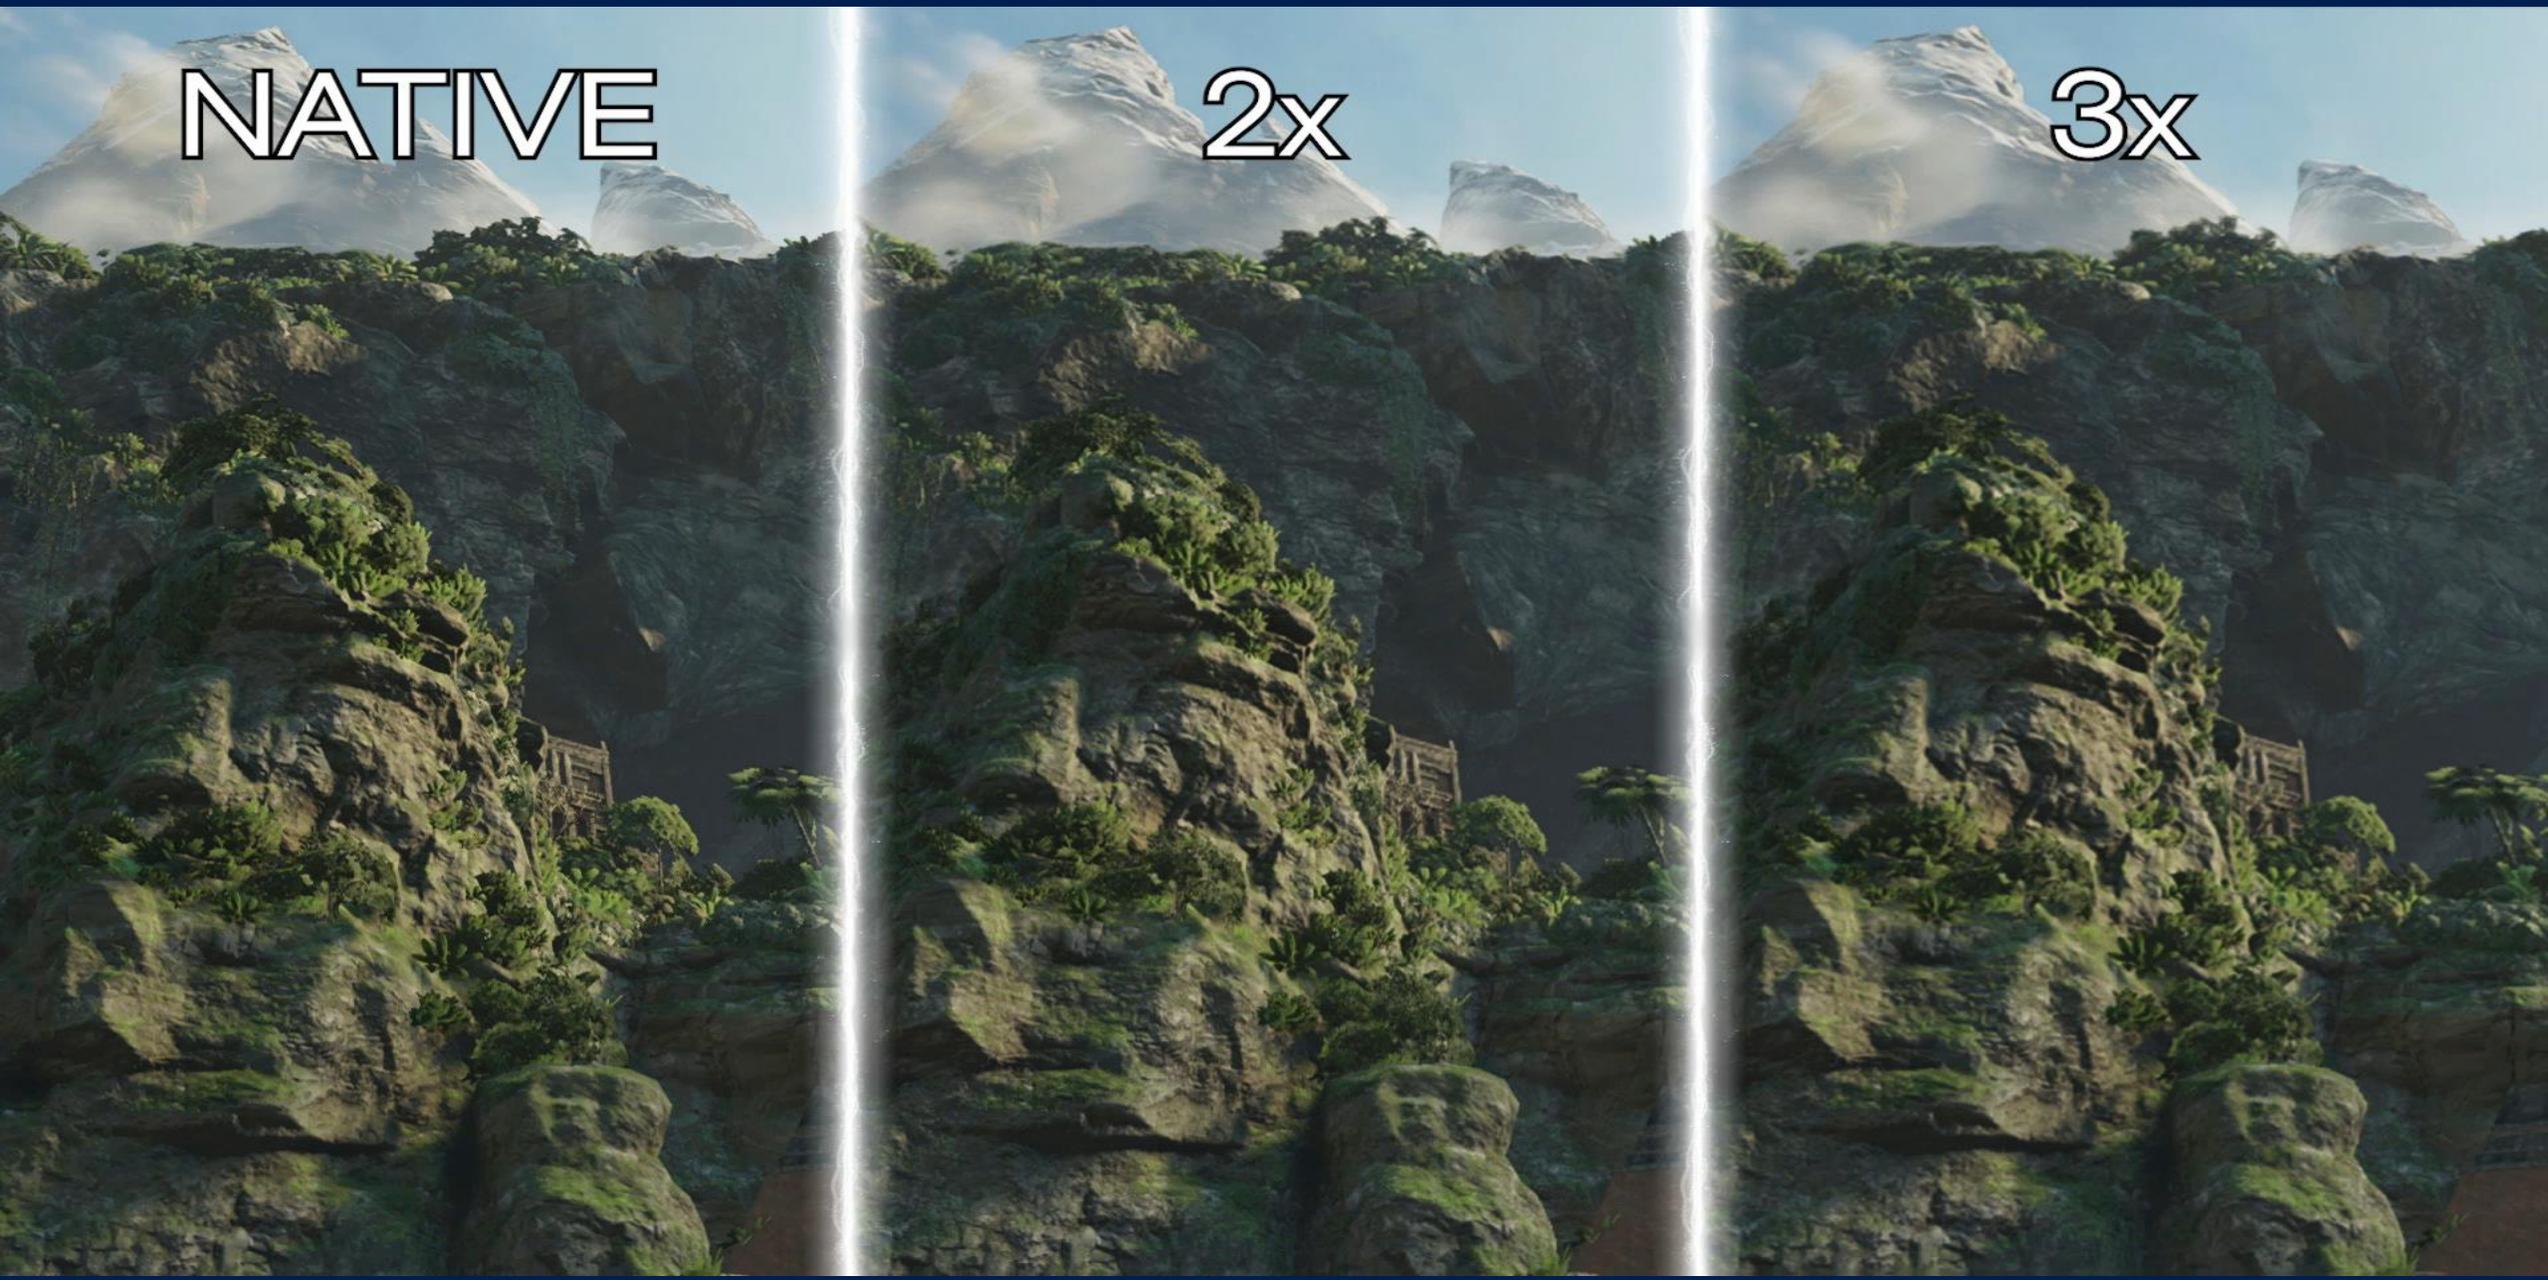

# 3x Scaling Sneak Peek

NATIVE

2x

3x

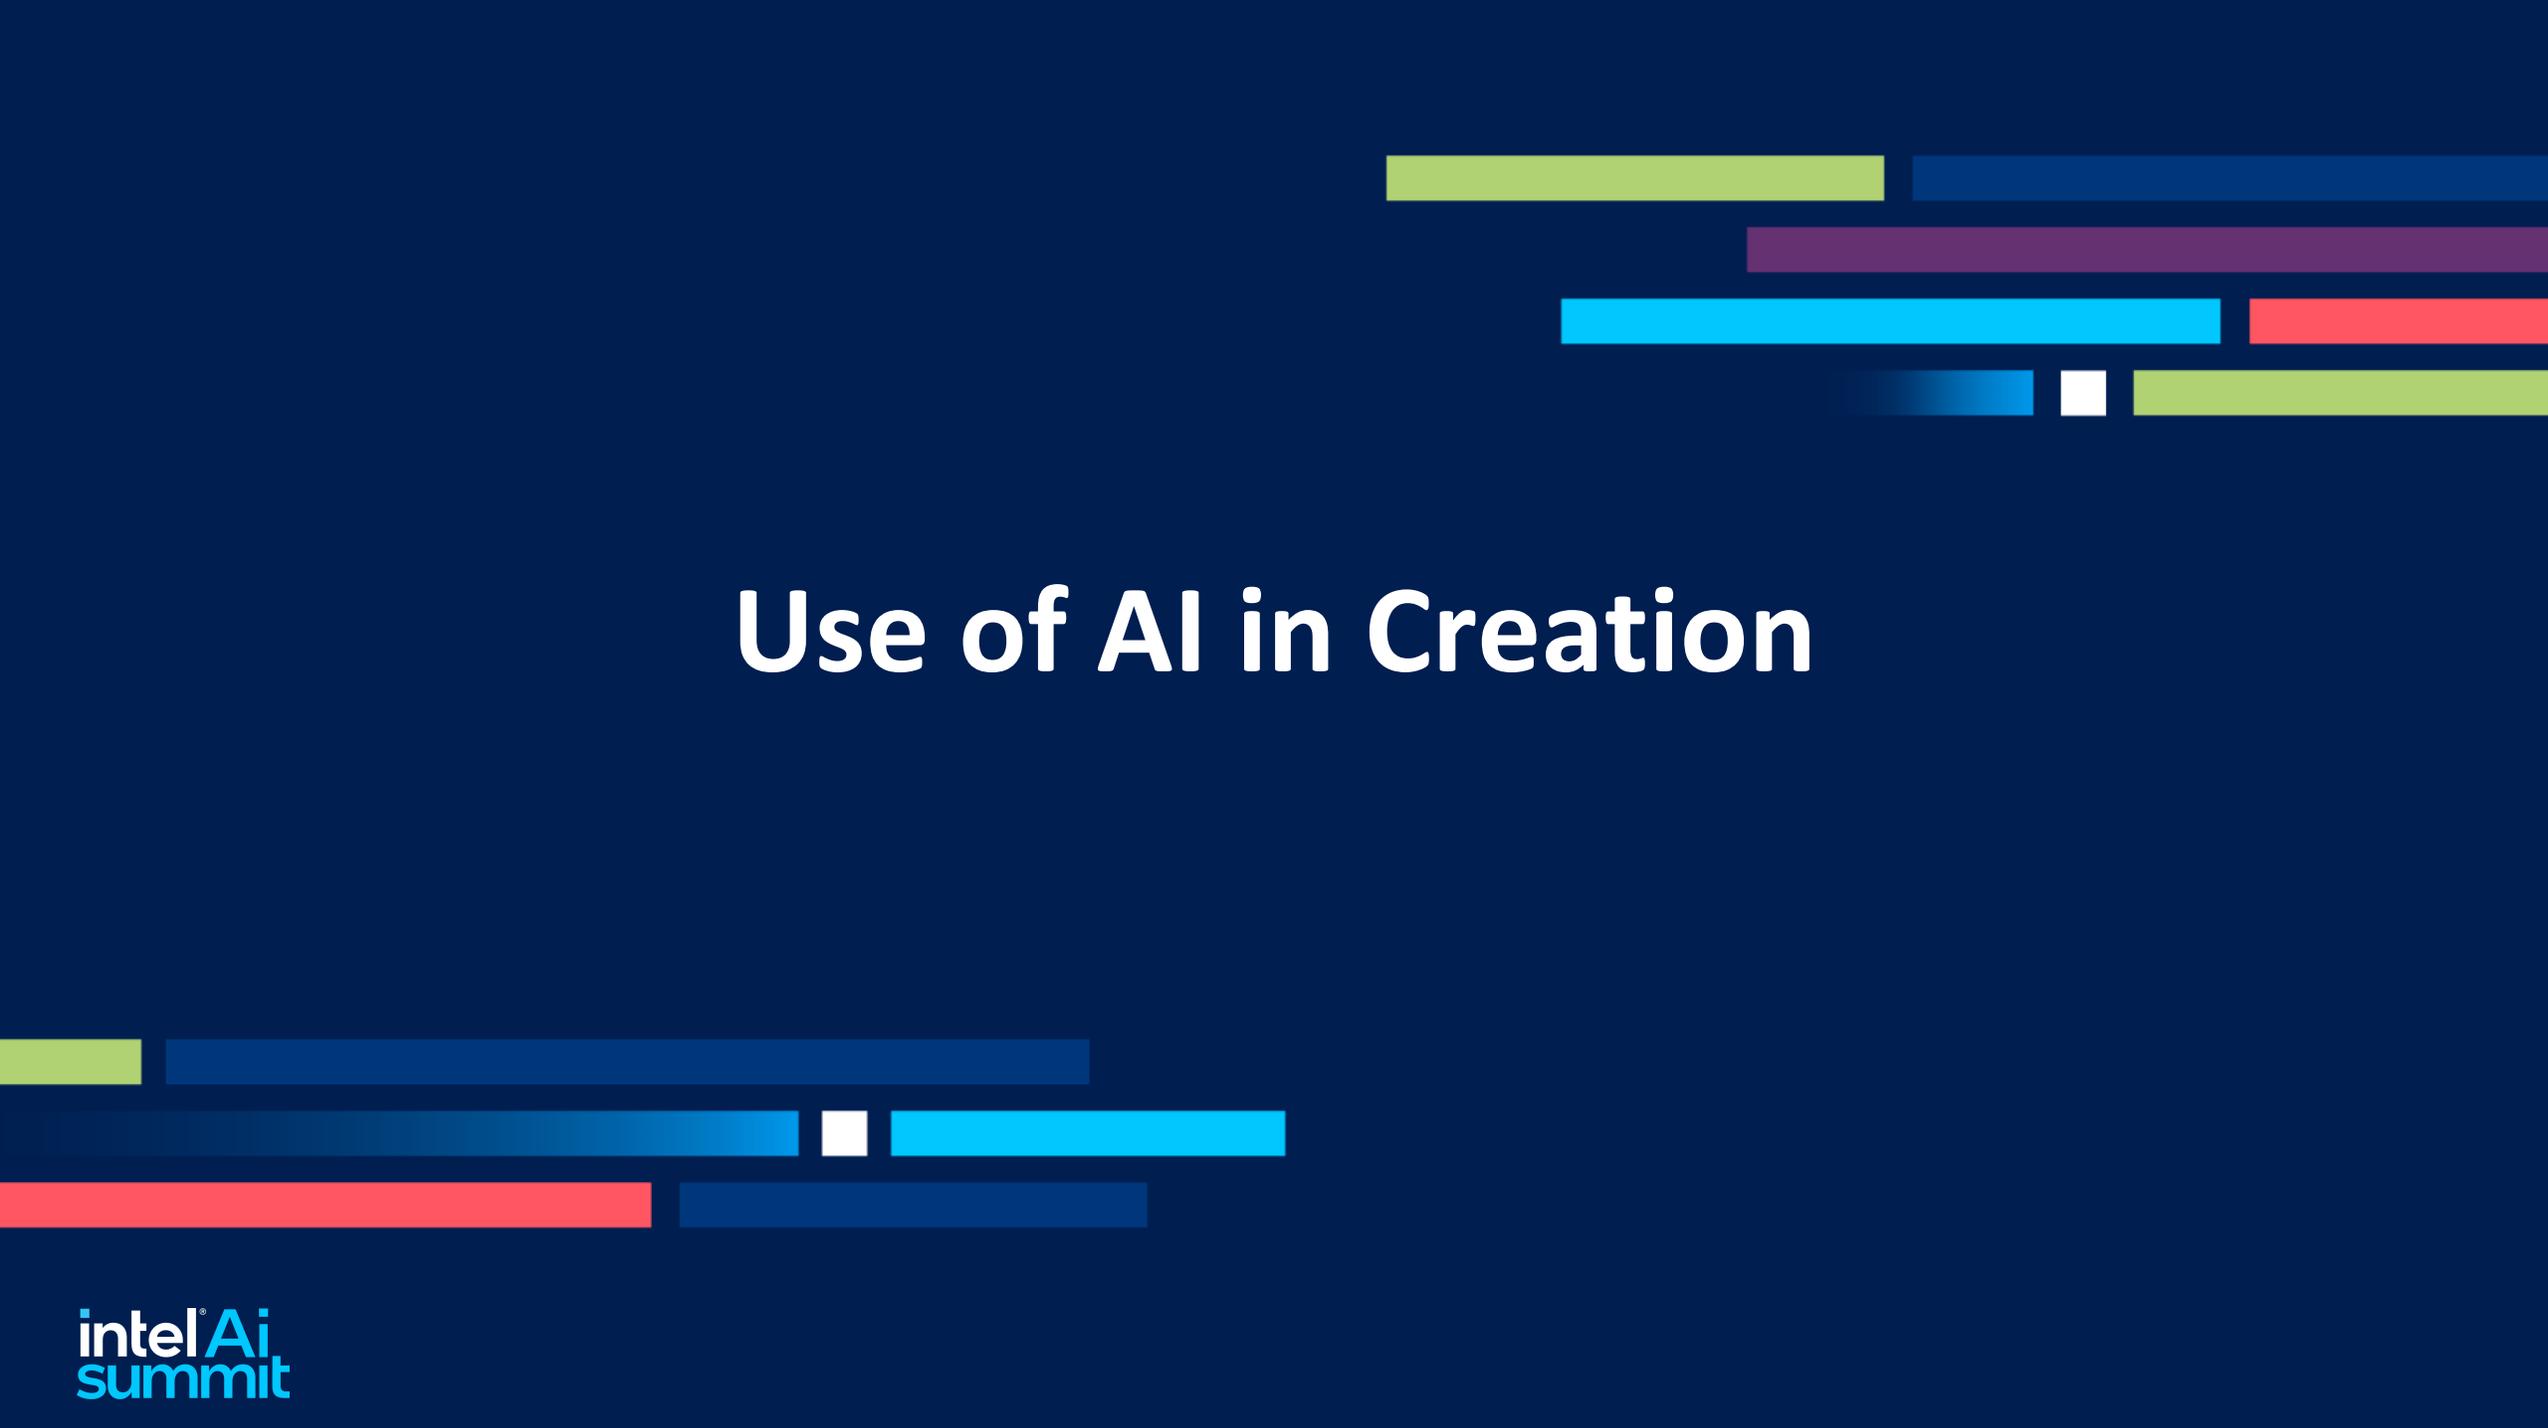

# Developer Resources

## Add XeSS support to your game

<https://github.com/intel/xess>  
<https://github.com/GameTechDev/XeSSUnrealPlugin>

## Check our developer website for all the latest info

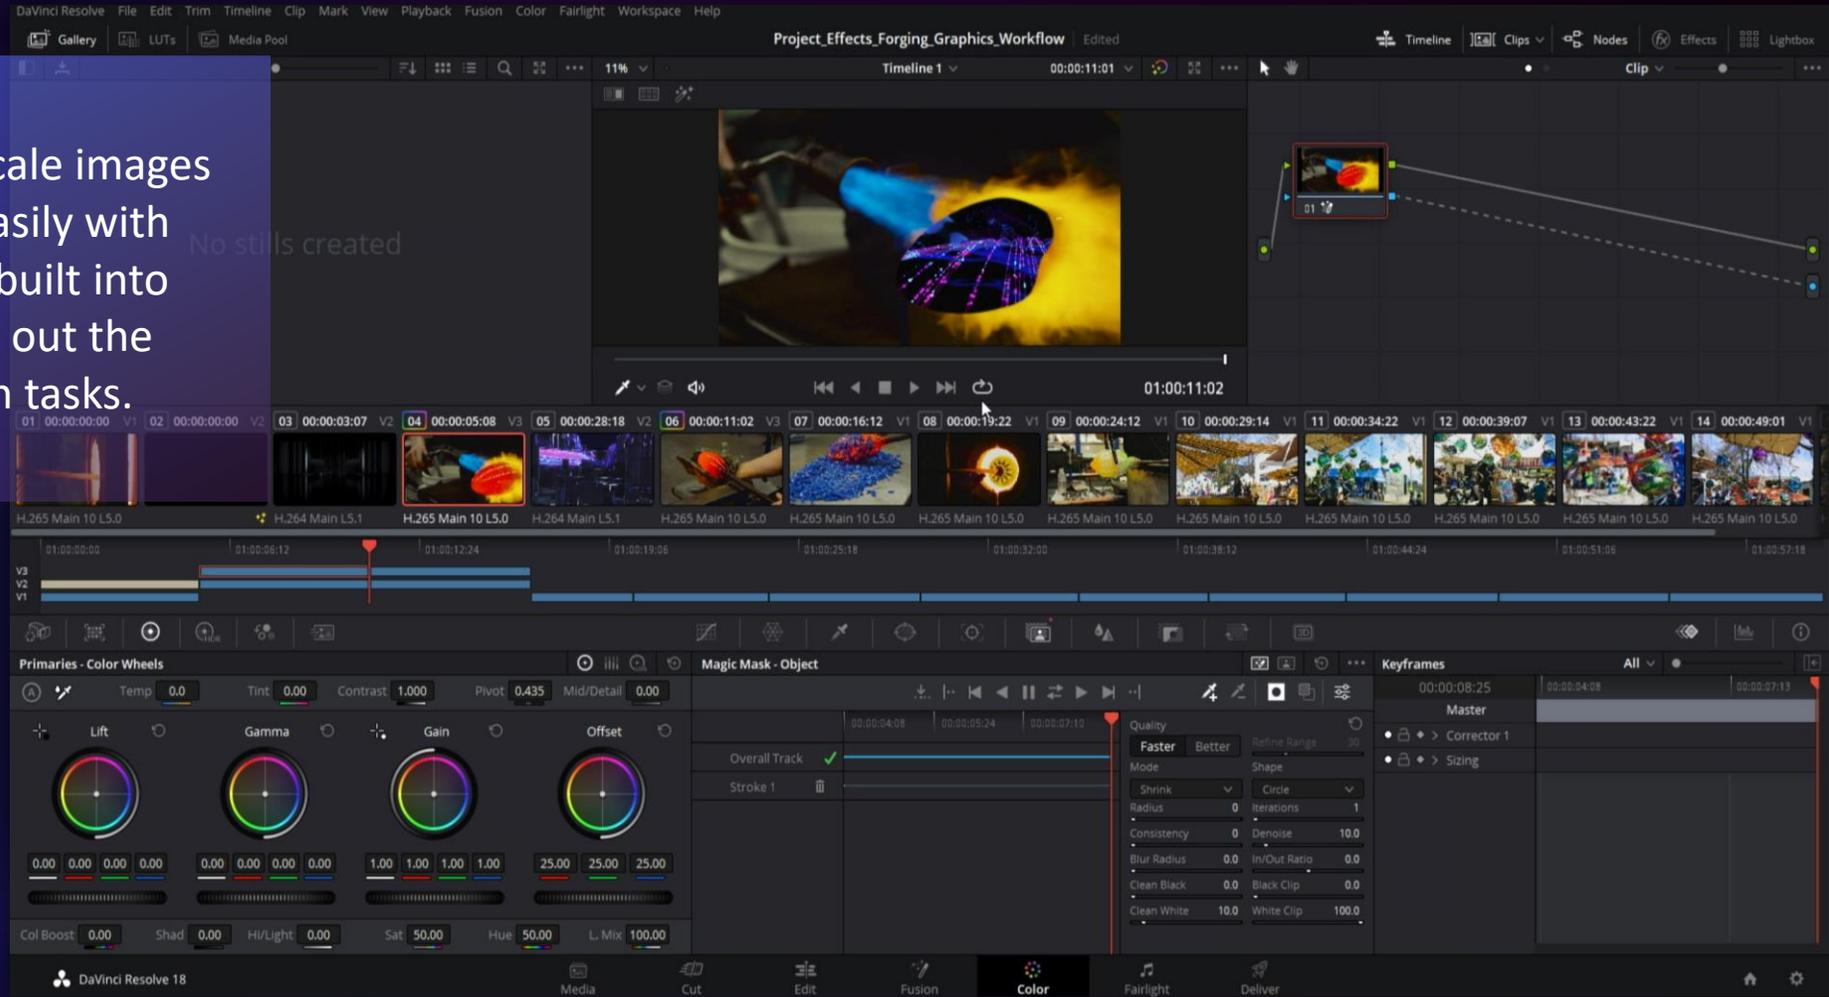

<http://gamedev.intel.com>  
<https://github.com/GameTechDev>  
[gamedevtech@intel.com](mailto:gamedevtech@intel.com)

# Use of AI in Creation

# Use of AI In Creation: Faster Enhancements

Execute post-processing, upscale images and edit videos quickly and easily with powerful XMV AI capabilities built into Intel® Arc™ graphics, bringing out the best in AI accelerated creation tasks.

# Use of AI In Creation: 3D Rendering

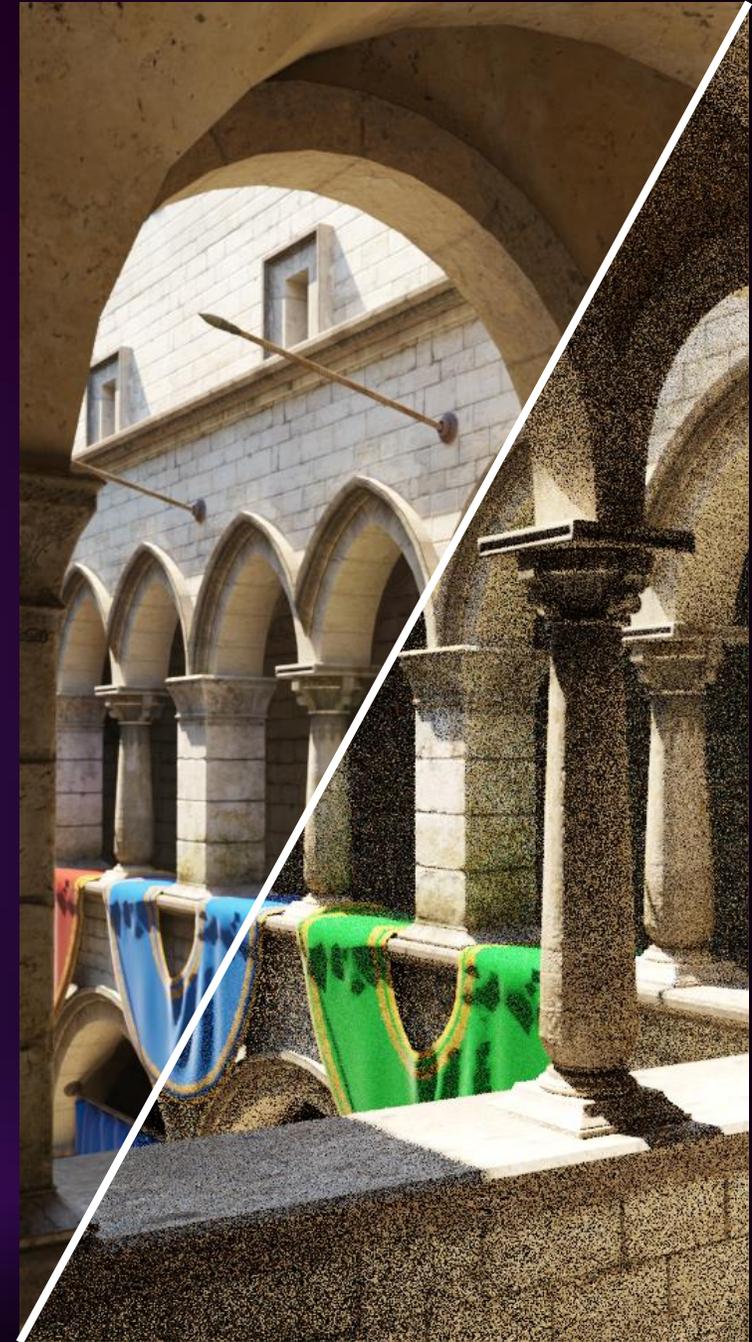

## Intel® Open Image Denoise (OIDN)

Denosing library for ray traced images that easily integrates into existing popular rendering applications, featuring:

- High-quality deep learning based denoising filters
- Final frames and baked lightmaps
- Suitable for interactive and offline rendering

[www.openimagedenoise.org/](http://www.openimagedenoise.org/)

Open Source under Apache 2.0 license

# Development Opportunities Examples

## Smart & Easy Photo Editor

- Upscale photos
- Change photo ratio without cropping
- Remove elements from photos

Foocus: example of easy and free to use photo editing

## AI Design Visualizer

- Beautify, clean up faces, and objects
- Quickly render architectural buildings
- Visualize and ideate interior design ideas

ComfyUI: example of quick renders of complex CAD files

# AI Rendering of CAD files using ComfyUI

The image displays a ComfyUI workflow for AI rendering of CAD files. The workflow includes a 'CLIP Text Encode (Prompt)' node with the prompt 'modern city buildings, downtown' and a 'CONDITIONING' node. The output is a rendered image of a city building. A terminal window shows the execution logs, and a performance monitor shows GPU usage.

**Terminal Output:**

```
In 1, Col 17 36 characters 100% Windows (CRT) UTF-8
at prompt
requested to load ControlNet
adding 1 new model
98%|-----| 4/4 [00:00:00, 6.211t/s]
prompt executed in 1.36 seconds
at prompt

# More tutorials @ youtube.com/@IntelTechnology

**AI Image Generation using Intel® Arc™ Pro A40 GPUs**  
For this workstation proof-of-concept, we're using a simple wireframe preview in Revit from Autodesk as real-time input for stable diffusion image generation. All on an #IntelArc Pro A40 GPU, with great results.  
<https://www.youtube.com/watch?v=i6FvA2YaEGI>

**A1111 WebUI with OpenVINO™ Toolkit for Intel® Arc™ GPUs (video)**  
Watch Intel's Bob Duffy walk through various AI image generation techniques using the A1111 WebUI, running on an #IntelArc GPU and powered by the #OpenVINO toolkit.  
<https://www.youtube.com/watch?v=5X0RmlH6JI4>

**Three Ways to Generate AI Art Using Intel® Arc™ GPUs (Article)**  
AI image generation tools now allow for higher control, iteration, and custom data sets, all possible on your PC and running on Intel Arc Graphics.  
<https://game.intel.com/story/intel-arc-graphics-generative-ai-art/>

**Using Stable Diffusion on GIMP with Intel Arc Graphics (video)**  
Learn to use your Intel Arc GPU to generate AI text to image art. The technique is accomplished with the OpenVINO toolkit and Stable Diffusion. Intel's Bob Duffy walks you through the process in this demo and tutorial.  
<https://www.youtube.com/watch?v=q8xJJPBjqso>

# Enable repository to support Intel Arc products

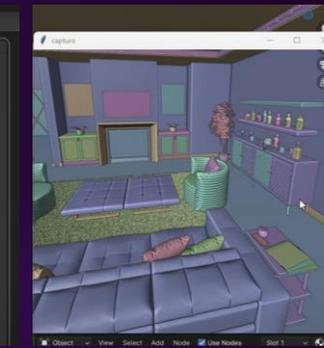

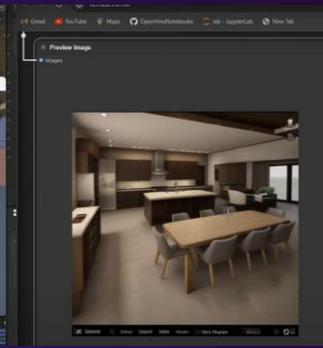

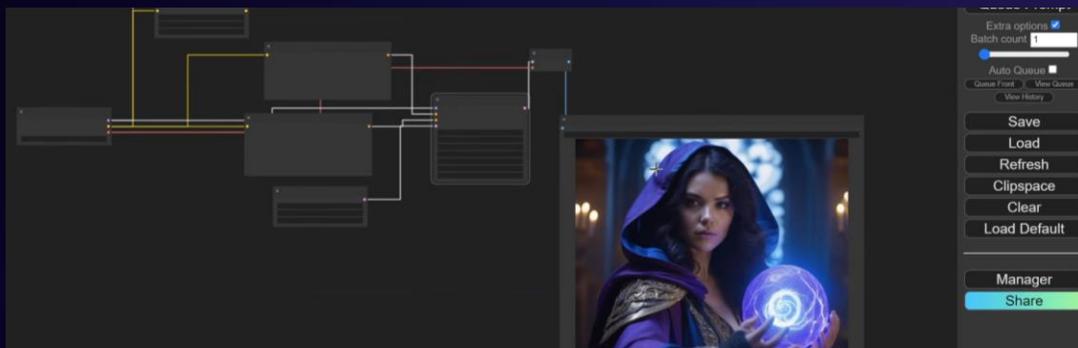

**How:** Forked repos with IPEX (few lines of code + public IPEX for Windows workaround library)

**Output:**

- Powerful unique features in each.
- Designed for different types of users
- Real world use cases with each tool
- Run on Intel Arc discrete GPUs

<https://youtube.com/watch?v=LORKVvdIpFA>

**Foocus:** Simple and smart interface, Powerful image editing, quality output

**ComfyUI:** Visual programming UI & custom node architecture; 3rd party apps can influence output (Blender used as a control for image generation)

# Example implementation (IPEX & OpenVINO)

## Diffusers

## CUDA

```
from diffusers import StableDiffusionPipeline
import torch

model_id = "runwayml/stable-diffusion-v1-5"
pipe = StableDiffusionPipeline.from_pretrained(model_id, torch_dtype=torch.float16)
pipe = pipe.to("cuda")

prompt = "a photo of an astronaut riding a horse on mars"
image = pipe(prompt).images[0]

image.save("astronaut_rides_horse.png")
```

## IPEX

```
from diffusers import StableDiffusionPipeline
import torch
import intel_extension_for_pytorch

model_id = "runwayml/stable-diffusion-v1-5"
pipe = StableDiffusionPipeline.from_pretrained(model_id, torch_dtype=torch.float16)
pipe = pipe.to("xpu")

prompt = "a photo of an astronaut riding a horse on mars"
image = pipe(prompt).images[0]

image.save("astronaut_rides_horse.png")
```

## Intel Extension for Pytorch (IPEX)

- Run the sample code from huggingface with couple line changes
  1. Setup python env with anaconda
  2. Pip install dependencies
  3. Copy paste sample code from huggingface
  4. Import intel\_extension\_for\_pytorch
  5. Change pipe.to("cuda") to pipe.to("xpu")
  6. Run sample code.

# Example implementation (IPEX & Intel<sup>®</sup> OpenVINO<sup>™</sup>)

```
from optimum.intel import OVStableDiffusionPipeline
import time
hugging_face_model = "runwayml/stable-diffusion-v1-5"
pipe = OVStableDiffusionPipeline.from_pretrained(hugging_face_model, export=True)
height=512
width=512
batch_size=1
steps=20
pipe.reshape(batch_size=batch_size, height=height, width=width, num_images_per_prompt=batch_size)
# default to GPU.0, specify device id if needed. i.e GPU.1
pipe.to("GPU")
pipe.compile()
prompt = "a majestic lion jumping over a stone at night"
output = pipe(prompt,
               height=height,
               width=width,
               num_inference_steps=steps,
               num_images_per_prompt=batch_size,
               output_type="pil"
               ).images[0]
```

## Intel<sup>®</sup> OpenVINO<sup>™</sup>

Run stable diffusion with pipelines from Optimum

OpenVINO can accelerate stable diffusion pipelines, with Hugging Face Optimum. This provides acceleration and cross-platform support, with an easy conversion from PyTorch to OpenVINO IR format.

With Optimum pipelines, it converts the model automatically

# Generative Content

# The advantage of more than 8 GB VRAM in Gen AI

As tested on Llama 2: offline large language model

~14GB VRAM required for Llama2-7B fp16 LLM to perform optimally

Less than 14GB VRAM requires extra steps and accuracy may be reduced

# Video Example of Chatbot

localhost:8501

### Configuration

max\_tokens: 500

temperature: 0.80

top\_p: 0.80

top\_k: 20

Reset the chat

2. General or strong AI: This type of AI is designed to perform any intellectual task that a human can, and is considered the holy grail of AI research.
3. Superintelligence: This type of AI is significantly more intelligent than the best human minds, and is capable of solving complex problems that are beyond human capabilities.
4. Transparency and explainability: These types of AI aim to make the decision-making process more understandable and transparent to humans. AI has many applications in various fields, including:
5. Healthcare: AI can help diagnose diseases, develop treatment plans, and even create personalized medicine.
6. Finance: AI can help with fraud detection, credit scoring, and portfolio management.
7. Manufacturing: AI can help optimize production processes, improve product quality, and reduce waste.
8. Transportation: AI can help develop autonomous vehicles, improve traffic flow, and optimize logistics.
9. Education: AI can help personalize learning experiences, grade assignments, and develop virtual teaching assistants. Overall, AI has the potential to revolutionize many industries and make a significant impact on society. However, it's important to note that AI is not a replacement for human intelligence and judgment, and should be used in conjunction with human expertise to achieve the best results.

# Example implementation (IPEX)

## Intel Extension for Pytorch (IPEX)

- Run the sample code from huggingface with couple line changes
  1. Setup python env with anaconda
  2. pip install IPEX packages
  3. Copy and paste code example from Huggingface
  4. Import intel\_extension\_for\_pytorch
  5. Change pipe.to("cuda") to pipe.to("xpu")
  6. Run sample code.

```
# Install transformers from source - only needed for versions <= v4.34
# pip install git+https://github.com/huggingface/transformers.git
# pip install accelerate
```

```
import torch
Import intel_extension_for_pytorch
from transformers import pipeline
```

```
pipe = pipeline("text-generation", model="TinyLlama/TinyLlama-1.1B-Chat-v1.0", torch_dtype=torch.bfloat16, device_map="xpu")
```

```
# We use the tokenizer's chat template to format each message - see
https://huggingface.co/docs/transformers/main/en/chat\_templating
```

```
messages = [
    {
        "role": "system",
        "content": "You are a friendly chatbot who always responds in the
style of a pirate",
    },
    {"role": "user", "content": "How many helicopters can a human eat in
one sitting?"},
]
prompt = pipe.tokenizer.apply_chat_template(messages, tokenize=False,
add_generation_prompt=True)
```

# Workloads and Configurations – LLM on 16GB of VRAM

## CLAIM

Intel Arc A770 GPU can run large language models. Due to 16GB of memory, it is able to Llama 2 at 8 tokens per second – significantly faster than other GPUs that are limited by memory.

## SYSTEM CONFIGURATION

Motherboard - ROG MAXIMUS Z790 HERO  
 BIOS - 1501  
 Memory - 32GB (2x16GB) DDR5 5600MHz  
 Memory SKU - CMT32GX5M2B5600C36  
 XMP RAM - DDR5-5600  
 CPU - i9-13900K  
 dGPU - Intel ARC A770  
 dGPU Driver - 31.0.101.5180 / 5122 / 5085  
 SSD - Corsair MP600 PRO XT  
 OS - Win 11 Pro  
 OS Version - 10.0.22631.2861  
 Power Policy - High Performance

## MEASUREMENT

As tested on Llama2-7B-fp16

Test was done by using streamlit chatbot scripts with LlamaTokenizer, OVModel for CausalLM and Llama for CausalLM pipelines

Results taken as a median from 3 runs measured Tokens per second:

- A770 - OpenVINO Optimum chatbot app: 8 tokens/s
- 4060 8GB – CUDA: 1.50 tokens/s

## MEASUREMENT PERIOD

Dec 12023

## The advantage of more than 8 GB in Gen AI

As tested on Llama 2: offline large language model

~14GB VRAM required for Llama2-7B fp16d LLM to perform optimally

Less than 14GB requires extra steps and accuracy may be reduced
